Next-level design to maximize next-level performance

DVX Automatic Spray Gun

New front end architecture sets the new standard in atomization technology

The new DVX series revolutionizes air spray guns with an innovative redesign of the fluid body and air caps – allowing us to master turbulence that occurs between the paint and air when the trigger is pulled. The result is higher flow rates for fast application, higher transfer efficiency to reduce material use, the most consistent pattern on the market, and the best in spray finish quality ever.

DVX Automatic Air Spray Guns feature a new manifold design with cam-lock quick release plus easier spaced fluid and air inlets. A redesigned back end allows for easy changes and maintenance.

- New Turbulence Control maximizes flow rate efficiency, precision, and spray finish quality
- Best air spray finish quality reduces orange peel, reduces mottling
- Reduce material usage
- Air cap orientation lock allows for more time spraying
- Large, consistent spray pattern size for less passes
- Designed to spray at 2 bar, reducing air consumption
- Works at low and high inlet air pressures
- Features HVLP PLUS air caps, capable of handling a range of materials across three pressure air caps and two gravity air caps
- Easy to install, clean, maintain, and repair
- Fewer parts and part numbers

Best finish quality

Fast, consistent application

High transfer efficiency

DVX Automatic Spray Gun

New gun body design for quicker, easier cleaning.

Smoother surfaces, reduced contours and fewer features on the gun body surface.

Improved wetted fluid sections for improved reliability & less downtime.

Redesigned internal features help to reduce paint build up and improve material flushing.

New manifold design

Cam-lock quick release, easier spaced fluid and air inlets. Installation is improved with adaptable air adjustments for remote/manual fan and atomization adjustments, single air inlet adjustments, and circulation plugs standard.

Quick release air cap with orientation lock for less time setting up & more consistent spraying.

Fast and easy air cap selection, fitting and removal with orientation lock.

Rear body section

Packing can be removed without dismantling body. Rear body section can be detached without removing rear knob. Revised needle end allows easier removal. Threaded holes allow simpler removal of piston without air.

Redesigned back end

Ratchet and fixed needle travel as standard selections. Less turns for full adjustment and easier to remove housing for repair/maintenance.

FIXED BACK
