

SKILL®

Airless Tip

High Performance Spray tip

Product highlights

- Productivity of the Airless at low pressure
- Built with double hard carbide insert
- Transfer efficiency of 84%

BOND • PROTECT • BEAUTIFY

SKILL®

Airless Tip

With low pressure Airless tips, you decrease the pressure by 50% compared to standard tips manufacturer. Particularly efficient for water-based UV paint. Recommended use for any quick pro application work with our manual and automatic Airless range; SFlow® manual gun and ASC automatic paint sprayers.

Adapted industrial markets

Airless spray technology

Skill® Tip

Description

Sames has developed a disruptor tip technology: Skill tips which are able to spray material reacting badly with air inclusion. The new generation of Skill® tips deliver a softer spray pattern on edges for a perfect overlapping on flat line and facilitates the settings on flat line machines. A double insert tip allows low Airless atomizing pressure without tail. Our Skill® Airless tips are made with high quality carbide inserts to provide high abrasion resistance & excellent atomization quality.

The Airless tips can be used on our SFlow® manual gun, ASC automatic gun, and all the Airless gun on the market.

Performances

- Transfer efficiency of 84%
- Optimum quality of spraying starting from 85 bar
- Light weight with our SFlow® spraying gun for maximum comfort

Productivity

- All tips have the same consistent pattern and flow to guarantee constant productivity
- Improved fan width to optimize the number of guns on the line
- Always clean in production for high productivity with excellent atomization

Sustainability

- The carbide used is the hardest in the world to guarantee the longest lifetime possible.
- Reduced internal volume to avoid dead zone and tip blockage
- Special tip shape to reduce the risk of dirt on the top of the nozzle and facilitate cleaning
- Easy maintenance: The tip is built with a removable lower insert to facilitate disassembling and cleaning
