

**183G (GALVANIZED) AND 183S (STAINLESS STEEL)
2-GALLON ASME TANKS – CAPACITY UP TO 2.8 GALLONS**

NOTE: DIRECT DRIVE AGITATION OPTION ONLY AVAILABLE WITH STAINLESS STEEL TANKS.

GALVANIZED 2-GALLON MODELS

Tank Model	Regulation	Agitation
183G-200	None	None
183G-210	Single (Regulated air to tank only)	None
183G-211	Single (Regulated air to tank only)	Direct Drive
183G-213	Single (Regulated air to tank only)	Gear-reduced (Heavy-duty)
183G-220	Double (Regulated air to tank and gun)	None
183G-221	Double (Regulated air to tank and gun)	Direct Drive
183G-223	Double (Regulated air to tank and gun)	Gear-reduced (Heavy-duty)
183G-230	Extra Sensitive	None
183G-231	Extra Sensitive	Direct Drive
183G-233	Extra Sensitive	Gear-reduced (Heavy-duty)
183G-240	Extra Sensitive w/ gun regulation	None
183G-241	Extra Sensitive w/ gun regulation	Direct Drive
183G-243	Extra Sensitive w/ gun regulation	Gear-reduced (Heavy-duty)

**Important:
Read and follow all
instructions and SAFETY
PRECAUTIONS before
using this equipment.
Retain for future
reference.**

STAINLESS STEEL 2-GALLON MODELS

183S-243	Extra Sensitive w/ gun regulation	Gear-reduced (Heavy-duty)
183S-244	Extra Sensitive w/ gun regulation	Direct Drive (Heavy-duty)

DESCRIPTION

Binks pressure feed tanks are intended for use as a pressure container to supply material at a constant preset pressure up to a maximum of 110 psi. The tanks are built to ASME specifications.

In this part sheet, the words **WARNING**, **CAUTION** and **NOTE** are used to emphasize important safety information as follows:

WARNING

Hazards or unsafe practices which could result in severe personal injury, death or substantial property damage.

CAUTION

Hazards or unsafe practices which could result in minor personal injury, product or property damage.

NOTE

Important installation, operation or maintenance information.

WARNING

Read the following warnings before using this equipment.

READ THE MANUAL

Before operating finishing equipment, read and understand all safety, operation and maintenance information provided in the operation manual.

OPERATOR TRAINING

All personnel must be trained before operating finishing equipment.

EQUIPMENT MISUSE HAZARD

Equipment misuse can cause the equipment to rupture, malfunction, or start unexpectedly and result in serious injury.

LOCK OUT / TAG-OUT

Failure to de-energize, disconnect, lock out and tag-out all power sources before performing equipment maintenance could cause serious injury or death.

AUTOMATIC EQUIPMENT

Automatic equipment may start suddenly without warning.

PRESSURE RELIEF PROCEDURE

Always follow the pressure relief procedure in the equipment instruction manual.

KEEP EQUIPMENT GUARDS IN PLACE

Do not operate the equipment if the safety devices have been removed.

KNOW WHERE AND HOW TO SHUT OFF THE EQUIPMENT IN CASE OF AN EMERGENCY

WEAR SAFETY GLASSES

Failure to wear safety glasses with side shields could result in serious eye injury or blindness.

INSPECT THE EQUIPMENT DAILY

Inspect the equipment for worn or broken parts on a daily basis. Do not operate the equipment if you are uncertain about its condition.

NEVER MODIFY THE EQUIPMENT

Do not modify the equipment unless the manufacturer provides written approval.

NOISE HAZARD

You may be injured by loud noise. Hearing protection may be required when using this equipment.

PROJECTILE HAZARD

You may be injured by venting liquids or gases that are released under pressure, or flying debris.

PINCH POINT HAZARD

Moving parts can crush and cut. Pinch points are basically any areas where there are moving parts.

STATIC CHARGE

Fluid may develop a static charge that must be dissipated through proper grounding of the equipment, objects to be sprayed and all other electrically conductive objects in the dispensing area. Improper grounding or sparks can cause a hazardous condition and result in fire, explosion or electric shock and other serious injury.

WEAR RESPIRATOR

Toxic fumes can cause serious injury or death if inhaled. Wear a respirator as recommended by the fluid and solvent manufacturer's Safety Data Sheet.

TOXIC FLUID & FUMES

Hazardous fluid or toxic fumes can cause serious injury or death if splashed in the eyes or on the skin, inhaled, injected or swallowed. LEARN and KNOW the specific hazards or the fluids you are using.

FIRE AND EXPLOSION HAZARD

Improper equipment grounding, poor ventilation, open flame or sparks can cause a hazardous condition and result in fire or explosion and serious injury.

MEDICAL ALERT

Any injury caused by high pressure liquid can be serious. If you are injured or even suspect an injury:

- Go to an emergency room immediately.
- Tell the doctor you suspect an injection injury.
- Show the doctor this medical information or the medical alert card provided with your airless spray equipment.
- Tell the doctor what kind of fluid you were spraying or dispensing.

GET IMMEDIATE MEDICAL ATTENTION

To prevent contact with the fluid, please note the following:

- Never point the gun/valve at anyone or any part of the body.
- Never put hand or fingers over the spray tip.
- Never attempt to stop or deflect fluid leaks with your hand, body, glove or rag.
- Always have the tip guard on the spray gun before spraying.
- Always ensure that the gun trigger safety operates before spraying.

IT IS THE RESPONSIBILITY OF THE EMPLOYER TO PROVIDE THIS INFORMATION TO THE OPERATOR OF THE EQUIPMENT. FOR FURTHER SAFETY INFORMATION REGARDING THIS EQUIPMENT, SEE THE GENERAL EQUIPMENT SAFETY BOOKLET (77-5300).

2-GALLON ASME TANKS – SAFEGUARDS

The following hazards may occur during the normal use of this equipment. Please read the following chart.

HAZARD	CAUSE	SAFEGUARDS
<p>Fire</p> 	<p>Solvents and coatings can be highly flammable or combustible, especially when sprayed.</p>	<ol style="list-style-type: none"> 1. Adequate exhaust must be provided to keep the air free of accumulations of flammable vapors. 2. Smoking must never be allowed in the spray area. 3. Fire extinguishing equipment must be present in the spray area.
<p>Fire – Pressure tank</p> 	<p>Vapors from flammable liquids can catch fire or explode.</p>	<p>Keep tank at least 10 feet away from sources of ignition. Ignition sources include hot objects, mechanical sparks, and arcing (non -explosion proof) electrical equipment.</p>
<p>Explosion Hazard – Pressure Tank – Static Electricity</p> 	<p>Static electricity is created by the flow of fluid through the pressure tank and hose. If all parts are not properly grounded, sparking may occur. Sparks can ignite vapors from solvents and the fluid being sprayed.</p>	<ol style="list-style-type: none"> 1. Ground the pressure tank by connecting one end of 12 gauge (minimum) ground wire to the pressure tank and the other end to a true earth ground. Local codes may have additional grounding requirements. 2. See illustration on page 6 for grounding and grounding hardware required.
<p>Explosion Hazard – Pressure Tank – Rupture</p> 	<p>Making changes to a pressure tank will weaken it.</p>	<ol style="list-style-type: none"> 1. Never drill into, weld, or modify the tank in any way. 2. Do not adjust, remove, or tamper with the safety valve. If replacement is necessary, use the same type and rating of valve.
<p>Explosion Hazard – Galvanized Tanks – Material Compatibility</p> 	<p>Halogenated hydrocarbon solvents – for example 1-1-1 Trichloroethane and methylene chloride – can chemically react with aluminum parts and components and cause an explosion hazard. These solvents will also corrode the galvanized tank coating.</p>	<ol style="list-style-type: none"> 1. Read the label or data sheet for the material. Do not use materials containing these solvents with galvanized pressure tanks. Stainless steel tank models may be used with halogenated solvents. 2. Refer to specifications chart to ensure that fluids are chemically compatible with the tank wetted parts. Before placing fluids or solvents in tank, always read accompanying manufacturer’s literature.
<p>General Safety</p>	<p>Improper operation or maintenance may create a hazard.</p>	<p>Operators should be given adequate training in the safe use and maintenance of the equipment (in accordance with the requirements of NFPA-33, Chapter 15 in U.S.) Users must comply with all local and national codes governing ventilation, fire precautions, operation, maintenance, and housekeeping (in the U.S., these are OSHA sections 1910.94 and 1910.107, and NFPA-33.</p>

<p>⚠ WARNING</p> <p>High pressure can cause serious injury.</p> <p>Pressure is maintained in a pressure tank after the system has been shut down.</p> <p>Always follow this procedure to relieve pressure from the tank.</p>	<p>PRESSURE RELIEF PROCEDURE</p> <p>To reduce the risk of injury, follow the pressure relief procedure below</p> <ul style="list-style-type: none"> • Before checking or servicing any part of the spray system • Before attempting removal of fill port cap or tank cover • Whenever the tank is left unattended <ol style="list-style-type: none"> 1. Turn off the main air supply to the tank. 2. Close the air inlet valve located on the tank air manifold. 3. Bleed off air in the tank by turning the air relief valve (5) thumb screw counterclockwise. Wait until all the air has escaped through the valve before removing the pressure tank cover or fill port cap. 4. Leave the air relief valve open until you have reinstalled the tank cover or fill port cap.

2-GALLON ASME TANKS – SPECIFICATIONS & OPTIONS

SPECIFICATIONS		
	GALVANIZED TANKS	STAINLESS STEEL TANKS
Maximum Working Pressure	110 psi	110 psi
Tank Shell	SA-414 Steel, Galvanized (Zinc)	304 Stainless Steel
Tank Lid	SA-414 Steel, Galvanized (Zinc)	304 Stainless Steel
Fluid Tube	3/8 in. Steel Pipe, Galvanized	3/8 in. SS Pipe, 316 Stainless Steel
Fluid Outlet (Elbow)	Steel, Zinc Plate	316 Stainless Steel
Fluid Valve, Outlet	Brass, Nickel Plate 3/8-18 NPS(M)	316 Stainless Steel 3/8-18 NPS(M)
Agitator Paddle/Propeller	Nylon, Glass Filled	Nylon, Glass Filled
Agitator Shaft	Steel, Zinc Plate	303 Stainless Steel
Agitator Shaft Seal	Engineered PTFE, Stainless Steel	Engineered PTFE, Stainless Steel
Air Manifold	Steel, Zinc Plate	Steel, Zinc Plate
Plug (Air Manifold Coupling)	Steel, Zinc Plate	18-8 Stainless Steel
Bottom Outlet (Optional Kit)	304 Stainless Steel 3/4-14 NPS(M)	304 Stainless Steel 3/4-14 NPS(M)

AIR CONTROL OPTIONS	
TYPE	APPLICATION
No Regulation (Air inlet pressure gauge only)	Holding tanks, Transfer tanks, Used where precision fluid pressure control is not required.
Standard Single Regulation	Provides standard fluid pressure control only. For use where precision control of both fluid and air pressures is not required. Also Used where atomization air can be taken from filter/regulator air lines.
Standard Double Regulation	Precision control for use with materials that are best applied at low, closely controlled, fluid and atomization air pressures. Used with portable air compressors or with air lines when no other means of air pressure regulation is available.
Extra Sensitive Regulation	Provides extremely accurate, low pressure, fluid pressure control
Extra Sensitive Regulation with Standard Gun Regulation	Provides extremely accurate, low pressure, fluid pressure control plus precision control of spray gun atomizing air.

AGITATION OPTIONS	
TYPE	APPLICATION
No Agitation*	Materials that require minimal or no mixing and/or readily hold any solids in suspension.
Gear-reduced Drive Agitation*	Heavy-duty agitator for medium to high viscosity materials that require mixing and/or solids suspension.
Direct Drive Agitation**	

*Note: Options available for both Galvanized and Stainless Steel Tanks.

**Note: Direct Drive Agitation option only available with Stainless Steel Tanks.

2-GALLON ASME TANKS – OPERATION & SERVICE CHECKS

⚠ WARNING

High pressure can cause serious injury.

Pressure is maintained in a pressure tank after the system has been shut down.

Follow the pressure-relief procedure on page 3 before opening the lid or fill port or performing maintenance on the tank.

PREPARATION

Mix and prepare material to be used according to manufacturer's instructions. Strain material through a fine mesh screen to remove lumps, skin, and foreign matter that might enter and clog fluid passages and/or spray equipment.

Follow pressure relief procedure above.

To add material to the tank, remove the lid and pour directly into the tank or container.

If desired, a U.S. or metric 1 gallon pail of fluid can be placed directly into the tank.

Replace the lid assembly and tighten thumb screws (17) securely.

The air supply to the tank should include a filter/water separator to filter dirt from the air and remove water and oil.

Connect the material hose to the fluid outlet ball valve (8).

OPERATION

1. Close the air inlet valve to tank. Turn handle on regulator counterclockwise until spring tension is relieved.
2. Turn on air supply to the tank.
3. Open the air inlet valve to the tank.
4. Open the fluid outlet valve.
5. Turn handle on tank pressure regulator clockwise to pressurize tank.
6. Turn on atomization air to spray gun at source of supply.
7. Test spray. For further instructions consult literature provided with spray gun.
8. If an air motor driven agitator is used, start the agitator by slowly opening up the needle valve. Air motor speed should be regulated according to the nature of the material being agitated.
5. Loosen spray gun air cap retaining ring about three turns.
6. Turn on air supply.
7. Cup cloth over air cap on the gun and pull trigger. This will force material back through the hose into the tank.
8. Empty and clean tank and parts that come into contact with material. Use a solvent compatible with material being used.
9. Pour solvent into tank.
10. Replace lid and tighten thumb screws and clamps.
11. Spray until clean solvent appears.
12. Repeat steps 4 through 8.

MAINTENANCE

To clean equipment, proceed as follows:

1. Turn off the air supply.
2. Follow the pressure relief procedure.
3. Turn T-handle adjusting screw on tank fluid pressure regulator counterclockwise until no spring pressure is felt.
4. Loosen thumb screws (17), tip clamps (16) back and tip lid (11) to one side of tank. Do not remove lid from tank.

LUBRICATION – Agitated Models

Refer to the service manual provided with the air motor for lubrication information.

The bearings in the agitator bearing assembly are impregnated with special non-gumming oil. Additional lubrication is not required.

The agitator shaft seal does not require lubrication.

SERVICE CHECKS

CONDITION	CAUSE	CORRECTION
Air escaping from port on regulator cap.	Broken or damaged diaphragm	Replace diaphragm.
Pressure creepage registered on gauge.	Dirty or worn valve seat in regulator.	Clean or replace valve seat.
Material tends to settle out rapidly.	Not enough agitation of material.	Increase agitation.
Air leakage at agitator seal.	Defective seal assembly.	Replace.
Paint getting into bearing assembly of agitator.	1. Paint level in tank too high. 2. Defective agitator shaft seal.	1. Keep fluid level under bearing ass'y. 2. Replace
Fluid or air leak at lid gasket.	1. Thumb screw not tight. 2. Defective lid gasket.	1. Tighten. 2. Replace.
Fluid or air leak at fill port gasket.	1. Fill port cap not tight. 2. Defective fill port gasket.	1. Tighten. 2. Replace.
Air mixing with paint	1. Fluid tube not sealed to lid. 2. Excessive agitation.	1. Tighten fluid tube into lid. 2. Reduce speed of agitator.

2-GALLON GALVANIZED AND STAINLESS STEEL TANK ASSEMBLIES

NOTE
Use PTFE based thread sealant on all air and fluid connections.

CAUTION
Use 40 PSI Safety Valve (6A) with an extra sensitive regulator.

+ KK-5013 Clamp, Pin, and Screw Kit includes 1 each of items 16, 17, 18, and 19.

When replacing either Item Number 29 or 35, you must order KK-4990 (Galvanized) or KK-4991 (Stainless Steel) which include both parts.

▲ Items available separately or as a complete agitator assembly:
QMG-416 (for galvanized tanks)
QMS-430 (for S.S. tanks)

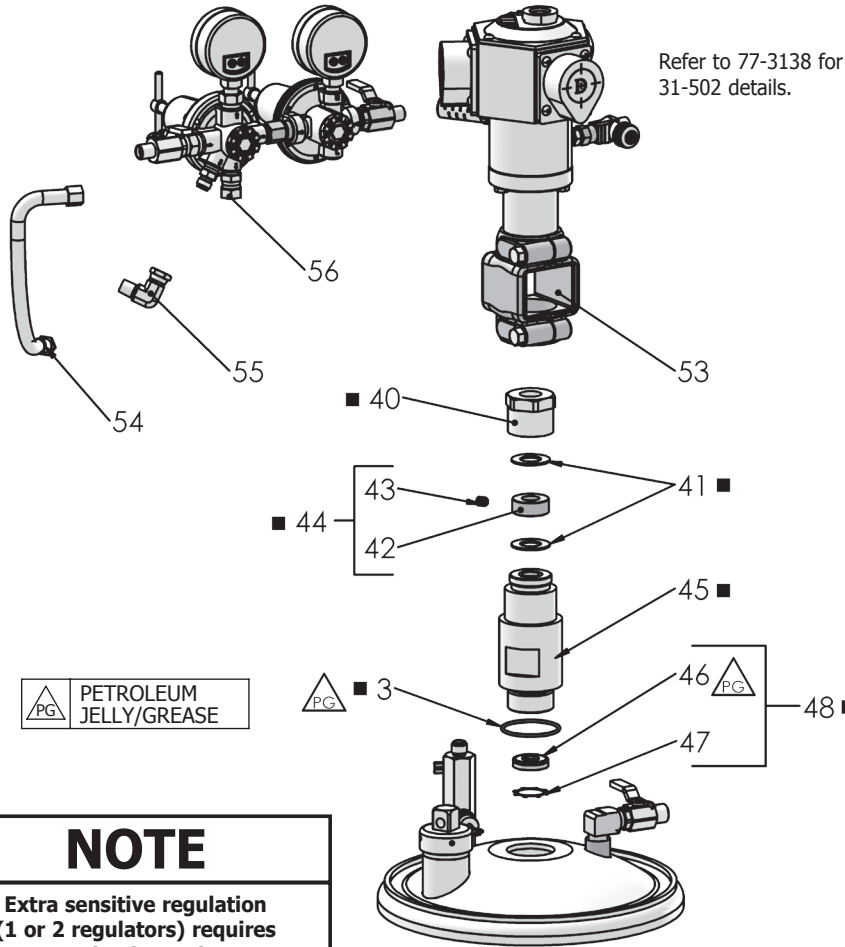

■ Items available separately or as a gear-reduced agitator (less drive):
QMG-417 (for galvanized tanks)
QMS-431 (for S.S. tanks)

DIRECT DRIVE AGITATOR

NOTE

Use PTFE based thread sealant on all air and fluid connections.

PG PETROLEUM JELLY/GREASE

NOTE

Extra sensitive regulation
(1 or 2 regulators) requires
40 psi safety valve.

NOTE

Open side of shaft seal (46)
faces downward.
Retainer (47) required only
for vacuum operation.

■ Items available separately or as a complete agitator assembly:
QMG-416 (for galvanized tanks)
QMS-430 (for S.S. tanks)

2-GALLON ASME TANKS – AIR CONTROL

SINGLE REGULATOR AIR CONTROL

Control tank pressure only.

85-470 for non-agitated tanks

85-471 for agitated tanks

*Items with an asterisk are for use with an agitator.
